

PRASHANTH MANNA

CLOUD & DEVOPS MANAGER | AI-DRIVEN INFRASTRUCTURE

+91 9704287453 | prashanthmanna.ai@gmail.com | linkedin.com/in/prashanth-manna | github.com/mannaprashanth
Hyderabad, India | Open to Remote / Relocation

PROFESSIONAL SUMMARY

Cloud & DevOps Manager with 6+ years of experience spanning enterprise infrastructure operations, on-premises datacenter environments, and modern multi-cloud engineering. Currently leads cloud infrastructure, DevOps strategy, and release operations full-time at The Supper, an Australian startup, after designing, deploying, automating, and securing infrastructure across four production platforms at ThinkHat.ai — primarily on Google Cloud Platform, with additional AWS expertise — using Terraform, Docker, Kubernetes, and GitHub Actions / Cloud Build CI/CD pipelines. Introduced an AI DevOps agent to automate the path from commit to deployment, and built a strong operational foundation over five years at Colruyt Group before transitioning into cloud engineering.

TECHNICAL SKILLS

Cloud Platforms: GCP (Cloud Run, Compute Engine, Cloud Build, Artifact Registry, Cloud Functions, Secret Manager, IAM, VPC, Load Balancing, Cloud DNS, BigQuery, Vertex AI); AWS (EC2, S3, IAM, VPC, RDS, EKS, CloudWatch)

Containers & Orchestration: Docker, Docker Compose, Kubernetes, GKE, EKS, Helm, Container Registries

Infrastructure as Code: Terraform, HCL, Terraform Modules, Policy as Code, OPA

CI/CD & Version Control: Git, GitHub, GitHub Actions, Bitbucket, Google Cloud Build, Jenkins, GitOps

Monitoring & Observability: Datadog, Google Cloud Monitoring, Cloud Logging, Prometheus, Grafana

Security & DevSecOps: IAM, RBAC, Secret Management, SonarCloud/SonarQube, SAST, SSL/TLS, Security Hardening

Databases & Platforms: PostgreSQL, MySQL, Hasura, Firebase, BigQuery

OS & Scripting: Linux, Windows Server, Bash, PowerShell, Python, YAML

Networking: TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, VPC, Load Balancing, Firewalls

Leadership & Management: DevOps strategy, release management, stakeholder communication, vendor coordination, cost optimization, incident command

PROFESSIONAL EXPERIENCE

The Supper — Cloud & DevOps Manager

May 2026 – Present | Full-time | Remote (Australia)

Fast-moving Australian startup; sole owner of cloud infrastructure, DevOps, and release operations

- Own end-to-end cloud infrastructure across development and production environments — architecture, provisioning, security, cost, and reliability — as the company's Cloud & DevOps Manager.
- Lead DevOps strategy and release management: design and operate CI/CD pipelines, define branching and deployment workflows, and coordinate releases with product and engineering stakeholders.
- Manage Terraform-based Infrastructure as Code for all environments, standardizing provisioning through reusable modules and reducing manual configuration.
- Operate containerized workloads with Docker, managing build, registry, and deployment lifecycles for fast, reliable releases.
- Establish monitoring, alerting, and incident response practices; lead troubleshooting of production issues across application, infrastructure, and networking layers to minimize downtime.
- Drive security and governance: IAM controls, secret management, SSL/TLS, and cloud cost optimization suited to a lean startup environment.
- Originally built The Supper's cloud infrastructure and CI/CD pipelines as a client engagement at ThinkHat.ai before joining full-time to lead the function.

ThinkHat.ai — Cloud & DevOps Engineer

2024 – May 2026 | India

Products supported: NOKI · Samaras · Socratic AI · The Supper

- Designed, deployed, maintained, and troubleshoot cloud infrastructure across development, staging, and production environments on GCP and AWS, supporting four concurrent production platforms.
- Built and maintained automated CI/CD pipelines using GitHub, GitHub Actions, Google Cloud Build, and Git-based workflows, streamlining release cycles and reducing manual deployment effort.
- Containerized applications with Docker and managed production-ready images through Google Artifact Registry; deployed via Google Cloud Run for faster, more reliable releases.

- Developed and maintained Terraform-based Infrastructure as Code, including reusable modules that significantly cut down manual cloud configuration and provisioning time.
- Worked with Kubernetes and cloud-native orchestration — deployments, services, pods, namespaces, ConfigMaps, Secrets, RBAC, ingress — including GKE/EKS and Helm.
- Introduced an AI DevOps agent for the Samaras platform operating automatically from a main-branch commit through to deployment, coordinating build, validation, and release steps.
- Managed application configuration and secrets securely using Google Secret Manager and cloud IAM controls, strengthening security posture across all supported platforms.
- Implemented monitoring and observability using Datadog and Google Cloud Monitoring with centralized log analysis; led troubleshooting of production incidents to minimize downtime.
- Implemented DevSecOps practices using SonarCloud/SonarQube, SAST, and OPA-based policy controls, catching vulnerabilities earlier in the development lifecycle.
- Contributed to an automated cloud-resource provisioning platform using structured infrastructure requests, Terraform Plan validation, and OPA policy checks — improving governance and substantially reducing manual provisioning overhead.

Colruyt Group — Operational System Engineer

2019 – 2024 | India

- Supported enterprise servers and applications running in internal data-center environments; deployed applications and services onto company-managed infrastructure with consistent uptime and reliability.
- Performed application deployment, server configuration, system maintenance, and operational support within enterprise incident- and change-management processes, ensuring smooth, low-disruption releases.
- Monitored system and application health, analyzed logs, and troubleshooted production incidents to quickly restore services and identify root causes, minimizing business impact.
- Built a strong foundation in Linux/server operations, enterprise deployments, and networking fundamentals over five years that enabled a smooth transition into cloud and DevOps engineering.

KEY PROJECTS

The Supper — Australian Startup

Cloud Infrastructure, Docker, Terraform, CI/CD

- Designed cloud infrastructure for development/production workloads and built CI/CD pipelines supporting a fast-moving startup environment; now lead the platform full-time as Cloud & DevOps Manager.

NOKI — Healthcare & EHR Platform

GCP, Cloud Run, Docker, Terraform, PostgreSQL, Hasura, Datadog

- Built containerized deployment workflows and automated build/release via Cloud Build; supported Cloud Run production troubleshooting and PostgreSQL/Hasura infrastructure.

Samaras — Clinical Trial & Life Sciences Platform

GCP, Docker, Terraform, CI/CD, AI Agents

- Delivered CI/CD automation and introduced an AI DevOps agent automating the commit-to-deployment pipeline, reducing manual release coordination.

Socratic AI — Healthcare & Clinical Simulation

GCP, Docker, Terraform, CI/CD, GitHub

- Automated deployment and release processes; supported IAM, secrets, DNS, and SSL/TLS configuration for a clinical simulation product.

EDUCATION

M.Sc., Computer Science — Bhavan's College, 2019

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Google Cloud / Vertex AI Certification
- Azure Cloud Architect — Professional Development
- Continuous learning in Cloud Architecture, Kubernetes, Terraform, DevOps, DevSecOps, Cloud Security, and Platform Engineering

AWARD

Build Master of the Year — Recognized for technical contribution, engineering excellence, and contribution to building and supporting technology platforms.
